1. Organisation Overview

Des-Lux Play is a luxury stuffed toy business founded by Des-J Sekgobela in 2020 in Burgersfort, Limpopo, South Africa. The company specializes in handcrafted, customizable stuffed toys and limited-edition collections. A defining feature is the donation of 10% of all profits to children's charities. The target market includes parents, gift buyers, collectors, and corporate clients. The brand slogan is 'Where Luxury Meets Imagination'.

2. Content Sources and Research

2.1 Primary Content Sources

The following sources were consulted to gather accurate and relevant content for the Des-Lux Play website:

- Organisation Brief: Direct information provided by the founder (Des-J Sekgobela) regarding the company history, mission, vision, product offerings, and charitable activities.
- Social Media Research: Analysis of typical luxury stuffed toy brands on Instagram and Pinterest to understand industry-standard product descriptions, visual presentation, and customer engagement strategies.
- E-commerce Benchmarking: Review of similar South African artisanal and luxury toy websites to identify best practices for product cataloguing, enquiry forms, and contact page layouts.
- Charity Sector Research: Investigation into South African children's charities (including orphanages in Limpopo and school feeding schemes in Mpumalanga) to ensure accurate representation of charitable partnerships and impact.

2.2 Content Created

All written content for the website was created specifically for this project. This includes:

- Product descriptions and specifications for the Standard Collection, Custom Creations, and Limited Editions.
- Founder biography and company history narrative.

- Mission and vision statements.
- Charity impact tracker content and partnership descriptions.
- Enquiry form fields and processing information.
- Contact page content including addresses, phone numbers, and business hours for two locations.

3. Image and Asset Sourcing

3.1 Images Required

The following nine images were identified as necessary for the website. All images are either AI-generated, self-created, or sourced from public domain/Creative Commons repositories to ensure legal compliance.

Filename	Description	Source	License
logo.png	Des-Lux Play brand logo with teddy bear silhouette, crown, and brand name	AI-generated / Self-created	Original
favicon.png	Website favicon icon — small teddy bear head silhouette in Deep Plum and Antique Gold	AI-generated / Self-created	Original
hero-banner.png	Wide hero banner of luxury stuffed toy collection on velvet surface with multiple toys	AI-generated (Midjourney/DALL-E)	Original
about-fouder.png	Founder Des-J Sekgobela hand-stitching a stuffed	AI-edited from personal photo	Original

	toy in workshop		
product-standarddd.png	Premium chestnut brown teddy bear with hand-tied antique gold satin bow — Standard Collection	AI-generated (Midjourney/DALL-E)	Original
product-custom-unicorn.png	Vibrant customized purple unicorn stuffed toy with lavender mane and silver horn — Custom Creations	AI-generated (Midjourney/DALL-E)	Original
product-custom.png	Vibrant emerald green custom dragon with embroidered silver scales — Custom Creations	AI-generated (Midjourney/DALL-E)	Original
product-limited.png	Exclusive golden lion stuffed toy in velvet-lined luxury box — Limited Edition	AI-generated (Midjourney/DALL-E)	Original
charity-kids.png	South African children joyfully hugging donated stuffed toys at charity event	AI-generated / Stock photo (Unsplash/Pexels)	Original / CC0

3.2 Image Generation Tools

AI-generated images were created using the following tools and prompts designed to match the brand's Deep Plum (#4A1C40), Soft Blush (#F4E1E1), Antique Gold (#C5A059), and Ivory White (#FAF9F6) colour palette. Each prompt specified professional product photography standards, shallow depth of field, and no text or watermarks.

- Midjourney v6: Used for high-quality product renders with --ar 1:1 and --style raw parameters.
- DALL-E 3: Used for photorealistic product photography with transparent or solid-colour backgrounds.
- Leonardo AI: Alternative platform for product photography presets.
- Unsplash / Pexels: Backup sources for documentary-style charity photography under CC0 license.

3.3 Legal Compliance

All images used in this project are either original creations (AI-generated with custom prompts) or sourced from public domain repositories. No copyrighted images were used without permission. The logo and favicon were self-designed to avoid trademark infringement. All AI-generated content is disclosed in accordance with The IIE's guidelines on AI usage.

4. File and Folder Structure

The following file and folder structure was established to maintain a well-organised project suitable for a small to medium website. This structure ensures that HTML pages, stylesheets, scripts, and image assets are logically separated and easily maintainable.

Root Directory Structure:

```
des-lux-play/
|
├── index.html           (Homepage)
├── about.html           (About Us page)
├── products.html        (Products catalog page)
├── enquiry.html         (Custom order enquiry form)
├── contact.html         (Contact page with two locations)
|
└── css/                 (Stylesheets folder)
```

```

|   └─ style.css           (External stylesheet - Part 2)
|
├─ js/                     (JavaScript folder)
|   └─ script.js          (JavaScript functionality - Part 3)
|
└─ images/                 (Image assets folder - 9 images)
    ├── logo.png           (Brand logo)
    ├── favicon.png        (Website favicon icon)
    ├── hero-banner.png    (Homepage hero image)
    ├── about-fouder.png   (Founder workshop photo)
    ├── product-standardd.png (Standard: Premium chestnut
teddy bear)
    ├── product-custom-unicorn.png (Custom: Vibrant purple unicorn)
    ├── product-custom.png    (Custom: Emerald green dragon)
    ├── product-limited.png   (Limited: Golden lion)
    └─ charity-kids.png       (Charity event photograph)

```

Rationale for Structure:

- **Root-level HTML files:** All five HTML pages are placed in the root directory to simplify relative linking between pages. This ensures that navigation links (e.g., href="about.html") function correctly without complex path traversal.
- **css/ folder:** Contains the external stylesheet. Separating presentation logic from HTML structure adheres to the principle of separation of concerns and makes maintenance easier. This folder is prepared for Part 2.
- **js/ folder:** Contains JavaScript files. Isolating behaviour scripts allows for modular development and prevents HTML files from becoming cluttered with inline code. This folder is prepared for Part 3.
- **images/ folder:** Consolidates all nine visual assets in a single location. Clear, descriptive filenames (e.g., product-standardd.png, product-custom-unicorn.png) eliminate ambiguity and make asset management straightforward.

5. Content Integration Plan

The following table maps each piece of researched content to its destination within the website structure:

Content	Source Page	HTML File
Brand slogan, hero banner, collection previews, charity	Homepage	index.html

stats, giveaway info		
Founder biography, mission/vision, charity commitment	About Us	about.html
Product names, descriptions, prices, custom order CTA — including bear, unicorn, dragon, and lion	Products	products.html
Custom order form, turnaround times, deposit info	Enquiry	enquiry.html
Contact form, Burgersfort HQ address/map, Polokwane store address/map	Contact	contact.html
