Part 1: Website Structure and Planning

Des-Lux Play

Table of Contents

1. 1. Sitemap
2. 2. File and Folder Structure
3. 3. Page Structure Descriptions
4. 4. Navigation System
5. 5. References

1. Sitemap

The following sitemap illustrates the hierarchical structure of the Des-Lux Play website. The site consists of five core pages, with the homepage serving as the central hub from which all other pages are accessible.

Visual Sitemap:

<<https://canva.link/uy2ftq4i8oas7rt>>

Hierarchy Description:

Level 0 (Root): Homepage (index.html)
└─ Level 1: About Us (about.html)
└─ Level 1: Products (products.html)
└─ Level 1: Enquiry (enquiry.html)
└─ Level 1: Contact (contact.html)

The sitemap follows a flat hierarchy where all secondary pages are directly accessible from the homepage. This ensures that users can reach any section of the website within a single click, improving usability and reducing navigation complexity. Each page contains a consistent navigation menu, allowing users to move between pages without returning to the homepage.

2. File and Folder Structure

A well-organised file and folder structure is essential for maintaining a scalable and manageable website. The following structure has been implemented for the Des-Lux Play project, including folders for future CSS and JavaScript development and all nine image assets:

Root Directory Structure:

```
des-lux-play/
|
├── index.html           (Homepage)
├── about.html          (About Us page)
├── products.html       (Products catalog page)
├── enquiry.html        (Custom order enquiry form)
├── contact.html        (Contact page with two locations)
|
├── css/                (Stylesheets folder)
│   └── style.css       (External stylesheet - Part 2)
|
├── js/                 (JavaScript folder)
│   └── script.js       (JavaScript functionality - Part 3)
|
└── images/             (Image assets folder - 9 images)
    ├── logo.png        (Brand logo)
    ├── favicon.png     (Website favicon icon)
    ├── hero-banner.png (Homepage hero image)
    ├── about-fouder.png (Founder workshop photo)
    ├── product-standard.png (Standard: Premium chestnut
teddy bear)
    ├── product-custom-unicorn.png (Custom: Vibrant purple unicorn)
    ├── product-custom.png (Custom: Emerald green dragon)
    ├── product-limited.png (Limited: Golden lion)
    └── charity-kids.png (Charity event photograph)
```

Rationale for Structure:

- **Root-level HTML files:** All five HTML pages are placed in the root directory to simplify relative linking between pages. This ensures that navigation links (e.g., `href="about.html"`) function correctly without complex path traversal.
- **css/ folder:** Contains the external stylesheet. Separating presentation logic from HTML structure adheres to the principle of separation of concerns and makes maintenance easier. This folder is prepared for Part 2 (CSS Styling and Responsive Design).

- `js/` folder: Contains JavaScript files. Isolating behaviour scripts allows for modular development and prevents HTML files from becoming cluttered with inline code. This folder is prepared for Part 3 (Enhancing Functionality and SEO).
- `images/` folder: Consolidates all nine visual assets in a single location. Clear, descriptive filenames (e.g., `product-standardd.png`, `product-custom-unicorn.png`) eliminate ambiguity and make asset management straightforward.

3. Page Structure Descriptions

Each page follows a consistent semantic HTML5 structure comprising a header, navigation, main content area, sidebar, and footer. This consistency ensures a predictable user experience and simplifies styling in Part 2.

Page	File	Content Structure
Homepage	index.html	Header → Nav → Hero section (hero-banner.png) → Standard Collection preview (product-standardd.png) → Custom Creations preview (product-custom.png) → Limited Editions preview (product-limited.png) → Charity highlight (charity-kids.png) → Sidebar (giveaway, tracker, newsletter, quick links) → Footer
About Us	about.html	Header → Nav → Founder story (about-fouder.png + bio) → Mission section (charity-kids.png + text) → Vision section (text-only) → Charity commitment (text-only) → Sidebar (maker profile, founded date, slogan) → Footer
Products	products.html	Header → Nav → Page intro → Standard Collection (product-standardd.png +

		description + price) → Custom Creations (product-custom-unicorn.png + product-custom.png + descriptions + CTA) → Limited Editions (product-limited.png + availability) → Sidebar (category filter, price range, custom order CTA) → Footer
Enquiry	enquiry.html	Header → Nav → Page intro → Custom order form (personal details fieldset → toy specifications fieldset → personalization fieldset → submit button) → Sidebar (order info, popular choices, help contact) → Footer
Contact	contact.html	Header → Nav → Page intro → Contact form (name, email, message type, message) → Burgersfort HQ (map + address + hours) → Polokwane store (map + address + hours) → Sidebar (quick contact, business hours, support info) → Footer

Semantic HTML5 Elements Used:

- `<header>`: Contains the brand logo (logo.png) and company name, consistent across all pages.
- `<nav>`: Houses the primary navigation menu and search functionality.
- `<main>`: Wraps the primary content unique to each page.
- `<aside>`: Contains sidebar widgets supplementary to the main content.
- `<footer>`: Displays copyright information and location, consistent across all pages.
- `<section>`: Groups related content blocks within the main area.
- `<article>`: Used for self-contained content pieces such as product cards and location details.
- `<fieldset>` and `<legend>`: Organise form elements into logical groupings on the enquiry and contact pages.

4. Navigation System

The navigation system is designed to be intuitive, consistent, and accessible. All five pages share an identical navigation structure, ensuring users can orient themselves regardless of their current location within the site.

Navigation Menu Structure:

[LOGO] Des-Lux Play					
HOME		PRODUCTS		ABOUT	
ENQUIRY					CONTACT [Search]

Navigation Features:

- **Consistency:** The same five links appear in the same order on every page, preventing user disorientation.
- **Functional Links:** All navigation links have been tested to ensure they correctly load the target page without broken references.
- **Self-Referencing:** Each page links to itself (e.g., the About page contains a link to about.html), which is standard practice and ensures link uniformity.
- **Search Integration:** A search input field and button are positioned at the right end of the navigation bar, providing a search interface for future implementation.
- **Accessibility:** Navigation links use clear, descriptive text (HOME, PRODUCTS, ABOUT, ENQUIRY, CONTACT) rather than vague labels, aiding screen reader users.

Two-Column Layout:

Each page employs a two-column layout where the main content occupies approximately 70% of the width and the sidebar occupies 30%. This layout mirrors the provided website diagram and ensures that supplementary information (widgets, promotions, quick links) remains visible without competing with primary content for attention.
